SUMMARY

Final-year BTech Computer Science and Design student with practical experience in developing and deploying web applications using HTML, CSS, JavaScript, and Firebase. Experienced in implementing authentication systems, role-based access control, and real-time database integration. Strong understanding of data structures and problem-solving with focus on clean, maintainable code.

PROJECTS

- **CampusResolve - College Complaint Management System**

alanbose-dev.github.io/campusresolve/ • Built a role-based web app for registering, tracking, and resolving institutional complaints. • Implemented Firebase Authentication and Firestore for access control and real-time updates. Developed admin-side features for complaint and task management.

- **SmartAlloc - Budget Planner Web App (Frontend)**

alanbose-dev.github.io/SmartAlloc/ • Built a frontend personal finance tracker with income, expense, and budget management. • Implemented client-side data storage using browser localStorage.

- **NOVA - Next Gen Opinion and Voting Arena**

<https://team-iselect.github.io/nova/> • Developing a secure digital voting web application with a user-friendly interface for casting and validating votes. Designed frontend components for vote interaction and result display. Implementing hash-based validation to ensure vote immutability and tamper detection with voter identity separation.
